Peruvian national · Spanish work permit

Mechanical engineer with an MBA, working reliability on mobile equipment in an underground mining operation. I run failure analysis and maintenance strategy on data, and I build the internal tools that are missing when that data does not exist: the application my department now runs its shift on is one I designed and built. Six years of engineering across three countries — Peru, Malta and Spain — leading teams, managing projects and rolling out in the field.

EXPERIENCE

Reliability Engineer

Jan 2026 – Present

ICL Iberia · Súria, Barcelona, Spain

Moved onto the payroll as a direct employee after working as a contractor, on the strength of the contribution to reliability initiatives.

- Lead reliability improvement work on mobile mining equipment in an underground salt and potash operation, aimed at raising availability and cutting recurring failures.
- Run failure analysis and Root Cause Analysis (RCA), turning findings into maintenance plan changes and practical action in the field.
- Drive lubricant standardisation and consolidation projects, including technical assessment of greases against reliability best practice.
- Carry out asset criticality analysis and optimise preventive maintenance strategy in SAP PM by operational risk and production impact.
- Track reliability indicators (MTBF, MTTR, downtime trends) so maintenance decisions rest on data rather than on instinct.
- Designed and built NexolBP, the internal application that replaced manual records and shared spreadsheets for machine status, shift handover and reliability reporting. Currently in rollout with a first group of users.

Implementation Lead — Preventive Maintenance

Oct 2025 – Jan 2026

Oxigent · ICL Iberia · Súria, Barcelona, Spain

- Led the rollout of new processes and systems in the field, including alignment standards and the lubricant consolidation programme.
- Owned technology integration: preventive plan improvements in SAP, IoT for predictive maintenance, and support for SAP Mobile.
- Acted as change leader, mentor and project manager, hands-on and present on site.
- Worked through resistance to change at every level of the organisation, which is where most of these rollouts fail.

Mechanical Engineer — GIS Technician

Oct 2023 – Sep 2025

Infinite Fusion · Water Services Corporation · Luqa, Malta

- Used Geographic Information System (GIS) tools to capture, store, verify and display the distribution of new valves and pipework on projects across Malta.
- Applied map reading and location work to project planning and execution.
- Daily reporting and ArcMap updates for the Water Services Corporation.

Project Coordinator

Aug 2023 – Oct 2023

Infinite Fusion · Qormi, Malta

- Consolidated project processes in MS Project: scheduling, dependencies and resource allocation.
- Gathered on-site expert judgement to build a complete schedule, giving a clear view of timelines and tasks.
- Led communication with a team of 13, carrying needs up to management and decisions back to the team.
- Coordinated procurement and got materials on site two weeks before they were needed, which is what kept the schedule standing.
- Delivered the full planning file for the ■urrieq farmhouse project, adapted to Excel so the team could actually read it.

Design, Projects and Operations Engineer

Dec 2020 – Mar 2023

AQUATERMICA Servicios Generales S.A.C · Lima, Peru

- Led a team of 10 across logistics, production and services.
- Ran the project to implement an ERP system, closing the communication gap between departments.
- Redesigned a 5 BHP domestic boiler, cutting production cost by 10% and improving thermal performance. This was my thesis.
- Ran cost control analysis that brought production costs down by 15%.
- Produced 3D models and drawings in Autodesk Inventor for equipment design.
- Handled supplier sourcing for FOB imports, with cost savings and on-time material delivery.
- Interviewed and technically assessed new staff.

3D Mechanical Parts Modeller — Freelance

2020 – 2022

HYDROSTEEL S.A.C · Lima, Peru

- Built 3D machine models in Autodesk Inventor from client orders and drawings, detailed enough to manufacture from.
- Worked directly with clients on specifications and revisions.

Team Lead and Design

Feb 2020 – Jul 2020

Clínica San Juan de Dios · UTEC Project · Lima, Peru

- Ran the first phase of economic and technical assessment of the clinic's thermal plant.
- Found the boiler was oversized by 150%, and quantified the energy being lost to it.

EDUCATION

MBA — Master in Business Administration

2024

London School of Commerce Malta

BSc Mechanical Engineering

2016 – 2021

UTEC — University of Engineering and Technology, Lima

CERTIFICATIONS

Advanced Excel + International Certification — Cámara de Comercio Exterior, Lima	2022
Pressure vessel calculation and design to ASME VIII — CISold, Lima	2023
Pumping systems for buildings — Makoto Ingenieros Sanitarios, Lima	2022
Boiler operation and maintenance — IDIA — Institute of Applied Engineering	2019
Centrifugal pump operation and handling — b2b Strategies	2018

SKILLS

Reliability and maintenance — RCA · Failure analysis · MTBF / MTTR · Asset criticality · RCM · Preventive maintenance strategy · Lubrication standardisation

Maintenance systems — SAP PM · SAP Mobile · IoT for predictive maintenance · Cost-per-ton analysis

Data and automation — Python · SQL Server · Excel / VBA · Power Automate · ArcMap / GIS · Statistics in Excel

Internal tooling — React · Node.js · TypeScript · HTML / CSS — used to build the maintenance applications described above

Design and engineering — Autodesk Inventor · SolidWorks · AutoCAD · ANSYS Fluent · LOGO Soft Comfort V8

Management — Team leadership · Project management · MS Project · ERP · Change management · Mentoring · Field rollout
